

Previous Address Social Security Tracker

FRS **PASST™** is a special product developed by Imagination Technologies exclusively for the clients of FRS. PASST™ is an acronym for our "Previous Address Social Security Tracker". This powerful tool will quickly search a database of over 20 Billion records for previous addresses and other identifying information about an applicant. The search is processed automatically through the FRS Automation Server and the report is retrieved instantaneously through an XML interface without the need for any user intervention. Each applicant's previous address report is populated back into FRS and is ready to view, report back to the client or process in a variety of ways.

The FRS **PASST** report will provide detailed information about an applicant including full names, aliases, as well as current and previous addresses along with the county, date-of-birth, age, phone numbers and the dates reported at each address found. Each applicant's social security number will also be validated. This validation will be included in the PASST report along with the social security number's date and state of issuance.

The FRS **PASST** is a fully integrated tool that is loaded with value-added features to improve and streamline your operations by providing time and labor savings. One of the most powerful of these features is the "Automatic Criminal Ordering" option. This is available through the integration of our "Intelli-Trace Technology". This technology will intelligently read through the PASST trace report and perform several automated processes:

- Automatically order criminal background checks for the counties in which an applicant has lived
 - ▶ These can automatically be assigned based on either a maximum number of counties to assign or a maximum number of years in history to research
 - ▶ Each of these options can be specified by client to match each of your client's package plans or background checking needs
- Flexible options available for retrieving the PASST reports based upon:
 - ✓ Social Security Number
 - ✓ Applicant Name, City and State
 - ✓ Applicant Name and Date of Birth
 - ✓ Applicant Name, State and Date of Birth
 - ✓ Applicant Name, City, State and Date of Birth
- Programmable "Alerts" to notify you of any of the following discrepancies found in the PASST report for an applicant, depending upon the search criteria:
 - ✓ Possible AKAs
 - ✓ Invalid social security numbers
 - ✓ Invalid date of birth
 - ✓ Applicant reported as deceased
- Options to "Freeze" any applicants for which discrepancies are found to allow further investigation by your staff prior to sending searches to your vendors or any results to your clients

Note: All of these flexible options can be set up and specified at the client level to meet each of your client's unique needs.

The FRS **PASST** product is just one example of the many innovations available in FRS.NeXT. At Imagination Technologies, we leverage the latest XML and Web Services technology to help provide the clients of FRS with the tools they need to ensure that their competitive advantage is the sharpest in the industry.
